

TASK 3

ASSIGNMENT 1:

Once I met this boy, and he was struggling a lot to remember the multiplication tables!

His teacher had asked him to memorise all the tables from 1 to 10 for next day's test and this poor fellow was racking his brains and crying out loud all crazy haha.

And I went to him, sat down and told him I had a surprise trick to memorise nines table!

He dint believe me at first but boy was he happy after how simple my trick turned out to be 😊

I told him to take both his hands forward and fold each finger and count the rest for each time.

So 1 nines are.. you fold one finger and count the rest which is 9!

And 2 nines are..you fold another finger and count the rest and add the before number..18!

And 3 nines are..now 3 fingers down..so its 27!

And on and on

And boyyy you should have seen his reaction hahahahha

It was priceless. I still remember his smile haha. He couldn't believe it was such an easy thing to do!

And before I got up, he asked me, "**Akka, mitha tables ku enna trick ka?**"

But sadly I couldn't help him there lol.

ASSIGNMENT 2:

I want to kick start my dream venture - Academic Masters, within 2027.
